Technically Beautiful Braces™

AO
AMERICAN
ORTHODONTICS

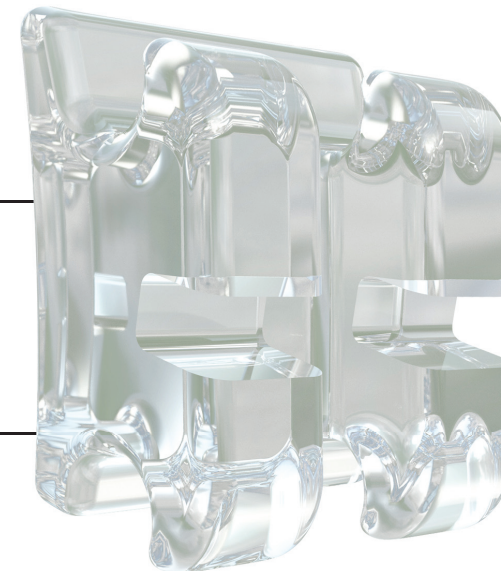

Confident smiles for an active lifestyle

You need a treatment option that will straighten your teeth quickly and effectively, provide a beautiful appearance during treatment, and address your specific orthodontic needs - and you're not alone. One in five people seeking orthodontics are adults, many needing a true aesthetic solution.

Radiance Plus is a clear orthodontic solution that allows you to confidently live your life while your teeth are being straightened. These exceptionally clear braces are appropriate for nearly every type of orthodontic need, and work continuously throughout treatment. Whether you're at work or at play, Radiance Plus delivers your ideal smile with no interruption to your treatment or active lifestyle.

The clear benefits

Radiance Plus braces are the ultimate combination of beauty, performance and strength. You will enjoy the benefits of the clearest braces available, while taking comfort in knowing they have the durability your orthodontist needs to effectively deliver your ideal smile.

BEAUTY

Radiance Plus braces are proven to be the clearest of all ceramic braces. They are made from pure grown sapphire, providing an exceptionally clear appearance. The body of the braces also resists stains, so Radiance Plus will stay brilliant throughout treatment.

PERFORMANCE

Radiance Plus braces are designed to help straighten your teeth quickly and effectively without sacrificing your comfort. A heat polishing process helps give Radiance Plus its smooth surface, and the braces are constructed to be as thick and durable as possible. The smooth, contoured design also makes Radiance Plus easier to keep clean, helping maintain proper hygiene throughout treatment.

STRENGTH

Radiance Plus braces are as strong as they are beautiful. The pure grown sapphire used for the bracket body is one of the hardest materials in nature, second only to diamond. Radiance Plus is designed to be as robust as possible while still keeping your comfort in mind. Once on your teeth, the patented Quad-Matte™ base keeps them on with unparalleled strength.

Your choice for a brilliant smile

There are several clear, aesthetic appliance choices available to straighten teeth, but many of these are only designed to work with the least complicated of orthodontic needs. Radiance Plus braces are designed to help correct nearly every type of case and are available in many options designed to address your specific aesthetic concerns. You can get Radiance Plus on your upper and lower teeth, on only the upper teeth, or even just the “social six” – the six upper teeth that show when you smile. Talk with your orthodontist about which option is right for you, and how Radiance Plus can provide a truly clear solution.
